Alaska SAR Demonstration (AKDEMO)

ALASKA SAR DEMONSTRATION USER MEETING

Fairbanks - 9/26/00, Juneau - 9/27/00, Anchorage - 9/28/00

AKDEMO USER MEETING AGENDA

8:30 am - Overview and Status of Alaska SAR Demonstration - Bill Pichel (NOAA/NESDIS)

9:10 am - Overview of SAR Observations of Winds - Chris Wackerman (Veridian ERIM International)

9:30 am - Alaska SAR Demonstration Wind Image Products - Frank Monaldo (JHU Applied Physics Laboratory)

10:15 am - Break

10:30 am - Alaska SAR Demonstration Wind Vector and Vessel Detection Products - Chris Wackerman

11:30 am - User Presentation (Fairbanks - TBD, Juneau - Fritz Funk, Anchorage - Rance Morrison)

11:50 am - Lunch

1:15 pm - System Performance - Ralph Meiggs and William Tseng (NOAA/NESDIS)

1:30 pm - WWW Image Processing Environment (WIPE) Current Configuration and New Capabilities - Erick Malaret (Applied Coherent Technology Corporation)

3:00 pm Break

3:15 pm New Products and User Discussion/Feedback - Pablo Clemente-Colón (NOAA/NESDIS)

4:30 Adjourn

Alaska SAR Demonstration (AKDEMO)

A pre-operational demonstration of near real-time coastal and marine products for Alaskan waters, derived from satellite synthetic aperture radar (SAR) data

NOAA

Alaska SAR Demo

AKDEMO Goals:

1. Develop, test, and validate prototype SAR products that respond to critical data needs of operational users not satisfied with present observational data in the Alaska region.
2. Provide sustained automatic production and near-real time delivery of SAR and ancillary data and products via the Internet for trial use by operational agencies in Alaska.
3. Familiarize the operational user community in the region with the interpretation and use of SAR image data and derived products.

ALASKA SAR DEMONSTRATION

A demonstration of near real-time SAR applications in Alaska began in the fall of 1999, with an anticipated duration of at least 2 years. The areas of interest are coastal Alaska waters of the Bering Sea, Beaufort Sea, Chukchi Sea, and Northern Gulf of Alaska (42° N - 76° N, 122° W - 155° E). Goals for the demonstration include: 1) Validate and test prototype SAR products that respond to critical needs not satisfied with present observational data in the Alaska region; 2) Provide SAR imagery and derived products in near real-time via the Internet for trial use by operational agencies; and 3) Familiarize operational agencies with SAR image data and products.

Illegal drift net vessel

RADARSAT ScanSAR Wide Imagery - Aleutian Islands

Synthetic Aperture Radar (SAR) data from the Canadian RADARSAT satellite is being evaluated as a monitoring tool for high seas drift net fishing enforcement. No confirmed reports yet.

During 1999, 8 vessels were detected by plane and ship and 3 seized in the North Pacific in a monitoring program coordinated by the North Pacific Anadromous Fish Commission (with member countries of Canada, Japan, Russia, and U.S.).

Final Considerations:

1. Although the potential of spaceborne SAR for atmospheric observation has been known to scientists for over twenty years, with SAR data being regularly available to the federal government in particular since 1995, the AKDEMO project is the first effort anywhere in the world to provide SAR meteorological products in support of operational weather forecast activities.
2. SAR-derived information on fleet locations in Alaskan and international waters cannot be obtained by any other means.
3. The AKDEMO approach takes the burden of managing high volumes of data from the local user while providing each user with SAR and complementary data and information tailored to their requirements.
4. The AKDEMO concept is transportable to other U.S. coastal regions, particularly if local acquisition stations are made available, and should serve as preparation for the upcoming series of additional spaceborne SAR sensors.
